Preface

Introduction

Chapter 1, Metric Spaces

1-1. Standard Finite Dimensional Vector Spaces	1
1-2. Convergent Sequences in Metric Spaces	3
1-3. Continuous Maps	4
1-4. Open Sets	7
1-5. Closures of Sets	8
1-6. Characterization of Continuity	10
1-7. Duality of Closure-Interior Operators	12
1-8. Partition of Unity	14

Chapter 2, Complete, Compact and Connected Sets

2-1. Cauchy Sequences	17
2-2. Bounded Sets	18
2-3. Upper and Lower Limits	19
2-4. Complete Sets	21
2-5. Precompact Sets	23
2-6. Compactness	26
2-7. Continuous Maps on Compact Spaces	29
2-8. Uniform Continuity	31
2-9. Connected Sets	33
2-10. Components	36

Chapter 3, Banach Spaces

3-1. Uniform Convergence	38
3-2. Bounded Continuous Functions	39
3-3. Sequence Spaces	42
3-4. Continuous Linear Maps	45
3-5. Examples of Continuous Linear Maps	49
3-6. Finite Dimensional Normed Spaces	51
3-7. Infinite Dimensional Compact Sets	54
3-8. Approximation in Function Spaces	57

Chapter 4, Simplicial Complexes

4-1. Geometrically Independent Sets	61
4-2. Convex Sets in Normed Spaces	65
4-3. Simplexes	67
4-4. Affine Maps	68
4-5. Simplicial Complexes	70
4-6. Small Simplexes	73
4-7. Barycentric Subdivisions	75

4-8. Simplicial Approximations	77
4-9. Existence of Simplicial Approximations	79
4-10. A Combinatorial Lemma with Application	81

Chapter 5, Topological Fixed Points

5-1. Antipodal Maps	85
5-2. Retracts and Fixed Points	88
5-3. Fixed Points of Compact Maps	91
5-4. Compact Fields and their Homotopies	92
5-5. Extension Property	95
5-6. Properties of Compact Fields in Normed Spaces	99

Chapter 6, Foundation of Functional Analysis

6-1. Transfinite Induction	104
6-2. Hahn-Banach Extension Theorems	106
6-3. Extension of Continuous Linear Forms	108
6-4. Closed Hyperplanes	110
6-5. Separation by Hyperplanes	113
6-6. Extreme Points	115
6-7. Baire's Property	117
6-8. Uniform Boundedness	118
6-9. Open Map and Closed Graph Theorems	120

Chapter 7, Natural Constructions

7-1. Bidual Spaces	124
7-2. Quotient Spaces	126
7-3. Duality of Subspaces and Quotients	128
7-4. Direct Sums	130
7-5. Transposes	134
7-6. Reflexive Spaces	137
7-7. Weak convergence	139
7-8. Weak-Star Convergence	142

Chapter 8, Complex Analysis

8-1. Derivatives of Vector Maps	144
8-2. Integrals of Regulated Maps	145
8-3. Fundamental Theorems of Calculus	148
8-4. Holomorphic Maps of One Complex Variable	151
8-5. Series Expansion	155
8-6. Spectrum	160
8-7. Spectral Radius	164
8-8. Holomorphic Maps of an Operator	166

Chapter 9, Differentiation in Banach Spaces

9-1. Differentiable Maps 172
 9-2. Mean-Value Theorem 175
 9-3. Partial Derivatives 178
 9-4. Fixed Points of Contractions 182
 9-5. Inverse and Implicit Mapping Theorems 183
 9-6. Local Properties of Differentiable Maps 187

Chapter 10, Polynomials and Higher Derivatives

10-1. Multilinear Maps on Banach Spaces 191
 10-2. Polynomials on Banach Spaces 194
 10-3. Higher Derivatives 198
 10-4. C^n -Maps 201
 10-5. Taylor's Expansion 205
 10-6. Higher Chain Formula and Higher Product Formula 209

Chapter 11, Ordinary Differential Equations

11-1. Local Existence and Uniqueness 213
 11-2. Integral Curves 216
 11-3. Linear Equations 218
 11-4. Exponential Functions of Matrices 223
 11-5. Global Dependence on Initial Conditions 225
 11-6. Solutions without Uniqueness 232

Chapter 12, Compact Linear Operators

12-1. Basic Properties 235
 12-2. Riesz-Schauder Theory 239
 12-3. Spectrum of a Compact Operator 243
 12-4. Existence of Invariant Subspaces 244
 12-5. Fredholm 246

Chapter 13, Operators on Hilbert Spaces

13-1. Complex Inner Product Spaces 251
 13-2. Orthogonality in Inner Product Spaces 253
 13-3. Orthonormal Bases of Hilbert Spaces 255
 13-4. Orthogonal Complements 258
 13-5. Adjoints 260
 13-6. Quadratic Forms 264
 13-7. Normal Operators 266
 13-8. Self-Adjoint Operators 268
 13-9. Projectors and Closed Vector Subspaces 270
 13-10. Partial Order of Operators 274
 13-11. Eigenvalues 278

Chapter 14, Spectral Properties of Hilbert Spaces

14-1. Spectrum of an Operator	281
14-2. Approximate Spectrum	282
14-3. Weak Convergence	285
14-4. Diagonal Operators	287
14-5. Compact Operators	289
14-6. Functional Calculus of Self-Adjoint Operators	295
14-7. Polar Decomposition	300

Chapter 15, Tensor Products

15-1. Algebraic Tensor Products of Vector Spaces	303
15-2. Tensor Products of Linear Maps	305
15-3. Independent Sets in Tensor Products	307
15-4. Matrix Representations	309
15-5. Projective Norms on Tensor Products	313
15-6. Inductive Norms	317
15-7. Tensor Product of Hilbert Spaces	319

Chapter 16, Complex Vector Lattices

16-1. Ordered Vector Spaces	325
16-2. Lattice Structure	326
16-3. Decomposition Property	329
16-4. Extension of Positive Linear Forms	331
16-5. Order Bounded Linear Forms	333

Chapter 17, Vector Measures on Semirings

17-1. Semirings	336
17-2. Charges and Associated Integrals	337
17-3. Finite Variation	340
17-4. Absolutely Convergent Charges	342
17-5. Countable Additivity on Rings	345
17-6. Vector Measures	348
17-7. Lebesgue-Stieltjes Measures	350

Chapter 18, Extensions of Positive Measures

18-1. Uniqueness of Extension	354
18-2. Outer Measures	356
18-3. Extension to Decent Sets	360

Chapter 19, Measurable Objects

19-1. Measurable Sets	362
19-2. Measurable Functions	364
19-3. Limits of Measurable Functions	367

19-4. Approximations by Simple Functions 368
 19-5. Measurable Maps 370
 19-6. More Properties 372

Chapter 20, Integrals of Upper Functions

20-1. Upper Functions 376
 20-2. Almost Everywhere 379
 20-3. Seeds of the Theory 381
 20-4. Sigma Finiteness 382
 20-5. Comparison of Two Positive Measures 384

Chapter 21, Vector Integrals

21-1. Extension to Integrable Sets 387
 21-2. Integrals of Vector Maps 389
 21-3. L_p -Spaces for $1 \leq p < \infty$ 392
 21-4. Mean Convergence 395
 21-5. L_∞ -Spaces 398
 21-6. Convergence in Measure 400
 21-7. Almost Uniform Convergence 402
 21-8. More Than One Measure 406
 21-9. Integration on Subspaces 407

Chapter 22, Finite Products of Measures

22-1. Product Measurable Spaces 410
 22-2. Product Measures 412
 22-3. Repeated Integrals 414

Chapter 23, Measures on Finite Dimensional Spaces

23-1. Decent Sets of \mathbb{R}^n 422
 23-2. Regularity 423
 23-3. Translation Invariance 425
 23-4. Relation to Outer Measures 428
 23-5. Change Variables in \mathbb{R}^n 429

Chapter 24, Indefinite Integrals

24-1. Derivatives 435
 24-2. Absolute Continuity 438
 24-3. Positive and Negative Sets 441
 24-4. Existence of Derivatives 442
 24-5. Hahn and Lebesgue Decompositions 446
 24-6. Duality of Classical Spaces 448
 24-7. Spaces with Radon-Nikodym Property 456

Chapter 25, Differentiation of Measures

25-1. Geometrical Expression of Radon-Nikodym Derivatives	463
25-2. Jumps of Increasing Functions	467
25-3. Fundamental Theorems of Real Analysis	470
25-4. Cantor Set and Function	474

Chapter 26, Spectral Measures

26-1. Construction from Self-Adjoint Operators	477
26-2. Extension of Spectral Measures	480
26-3. Spectral Integration	485
26-4. Null Sets of Spectral Measures	488
26-5. Product Spectral Measures	491
26-6. Spectral Measures of Normal Operators	493

Chapter 27, Locally Compact Spaces

27-1. Regular Measures	499
27-2. Construction from Positive Linear Forms	502
27-3. Representations of Order-Bounded Linear Forms	505

Chapter 28, Almost Periodic Functions on Groups

28-1. Almost Periodicity	508
28-2. Mean Values	512
28-3. Convolutions	517
28-4. Eigen Expansion	522

Chapter 29, Group Representations

29-1. Matrix Representations	528
29-2. Characterization of Projectors	533
29-3. Fourier Matrices	537

Chapter 30, Saturated Closed Invariant Ideals

30-1. Dual Objects	543
30-2. Characters	545
30-3. Saturated Dual Objects	550
30-4. Separating Points	556

Chapter 31, Mean Spaces

31-1. Representations of Product Groups	561
31-2. Means on Groups	565
31-3. Order Structure on Mean Spaces	568
31-4. Identification of Functions as Means	570
31-5. Fourier Matrices of Means	573
